

Steps for setting a web page on GitHub.

The following are steps for setting up a web page on GitHub.

Step 1. Create a new repository and name it (suggesting first initial plus last name, e.g., **chpeng**)

Name the repository that will be used to store all files for your web page. As a convention, people usually use the initial of name put last name. I will use **chpeng** to name my web page repository (folder).

(Assuming you have a **local mirror fold** that has all files used in the web page).

You can create folders and subfolders within the web repository to organize different types of files to be linked to your web pages.

This PC > Desktop > cpeng > WCU-Teaching > 2024Spring > STA490

<input type="checkbox"/> Name	Status	Date modified	Type
at-risk-survey	✓	12/2/2023 8:12 AM	File folder
backup-index	✓	12/4/2023 5:05 PM	File folder
cpeng	↻	12/15/2023 12:44 AM	File folder
css	✓	12/1/2023 12:15 AM	File folder
img	✓	12/15/2023 8:37 PM	File folder
js	✓	12/5/2023 9:29 PM	File folder
STA490-12	✓	11/29/2023 10:26 AM	File folder

Step 2. Upload all files in the local mirror folder to GitHub repository you just created.

Set up GitHub Copilot
Use GitHub's AI pair programmer to autocomplete suggestions as you code.
[Get started with GitHub Copilot](#)

Add collaborators to this repository
Search for people using their GitHub username or email address.
[Invite collaborators](#)

Quick setup — if you've done this kind of thing before

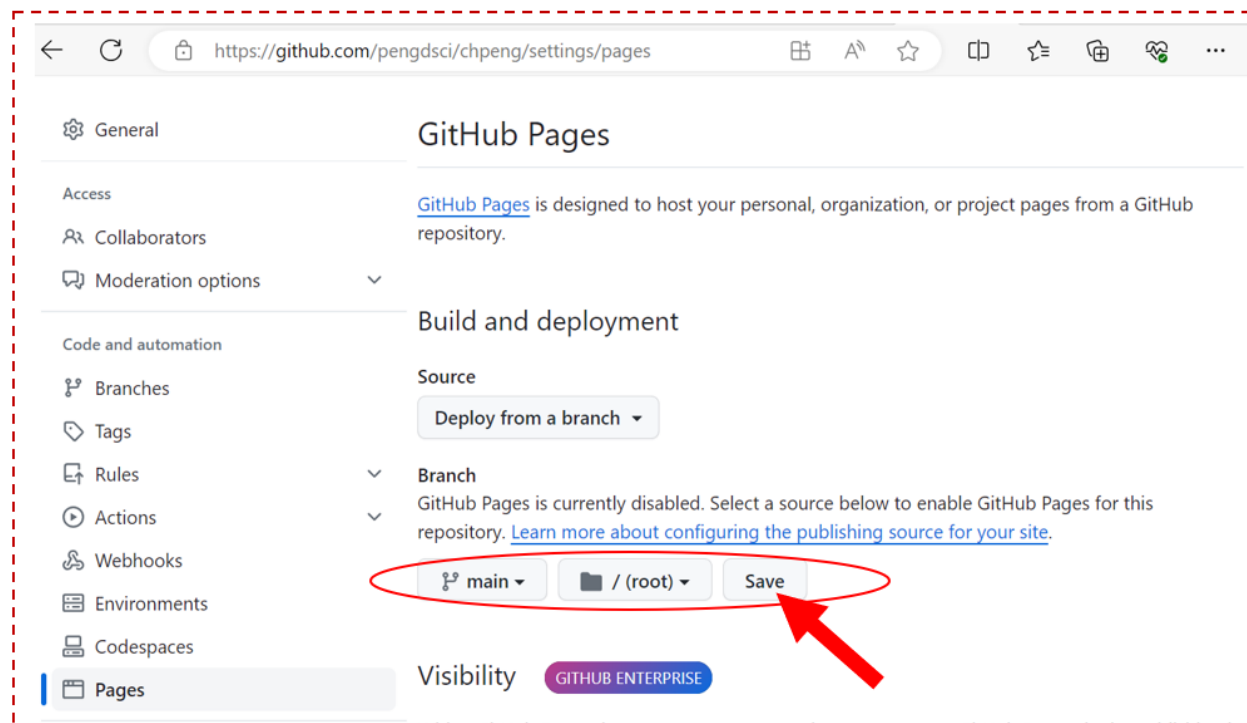

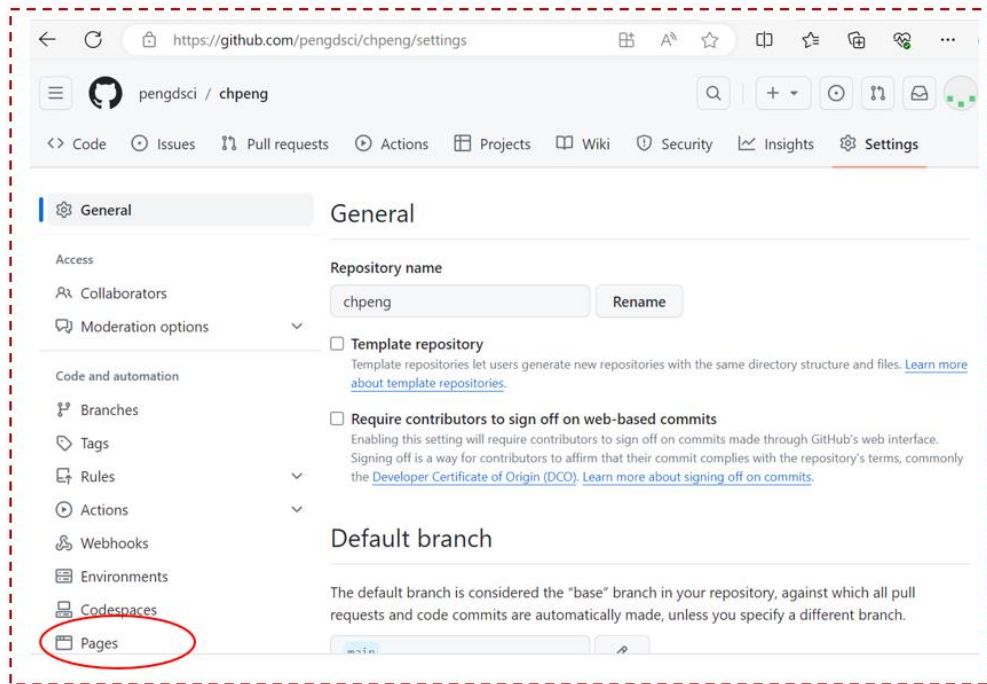

Set up in Desktop
 or
 [HTTPS](#)
[SSH](#)
<https://github.com/pengdsci/chpeng.git>

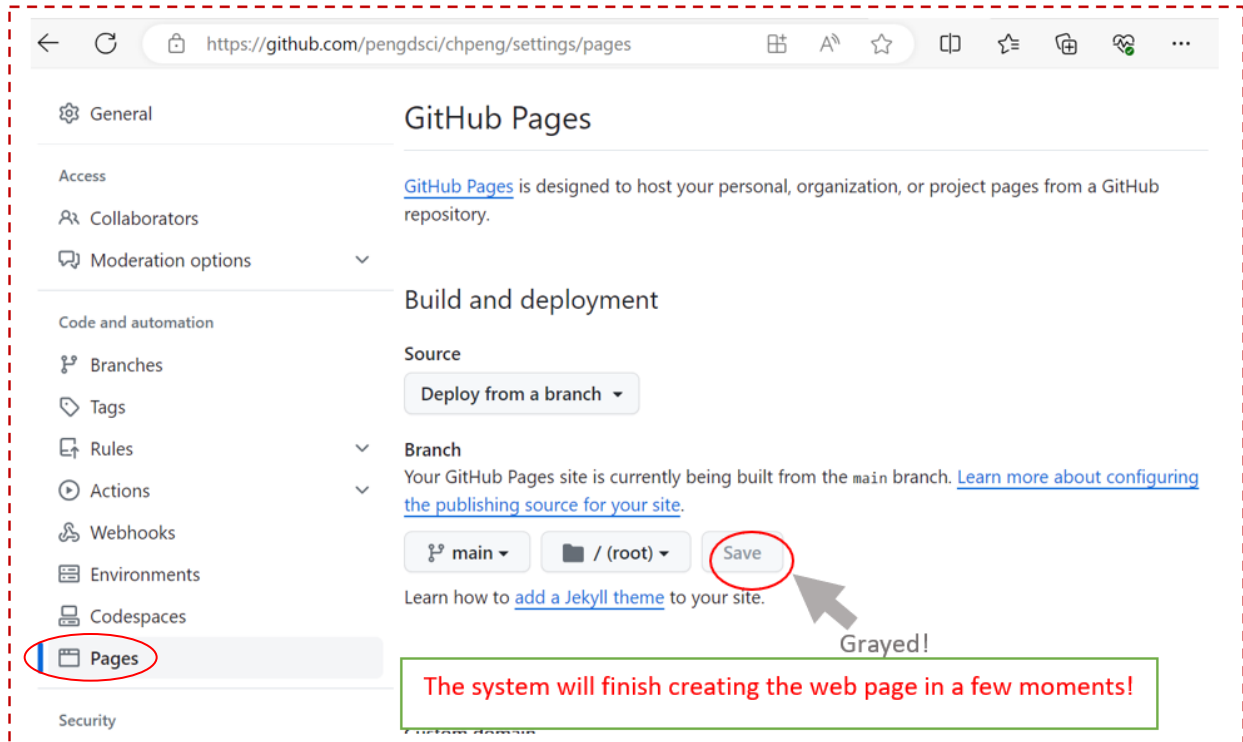

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

Step 3. Configuration the web page

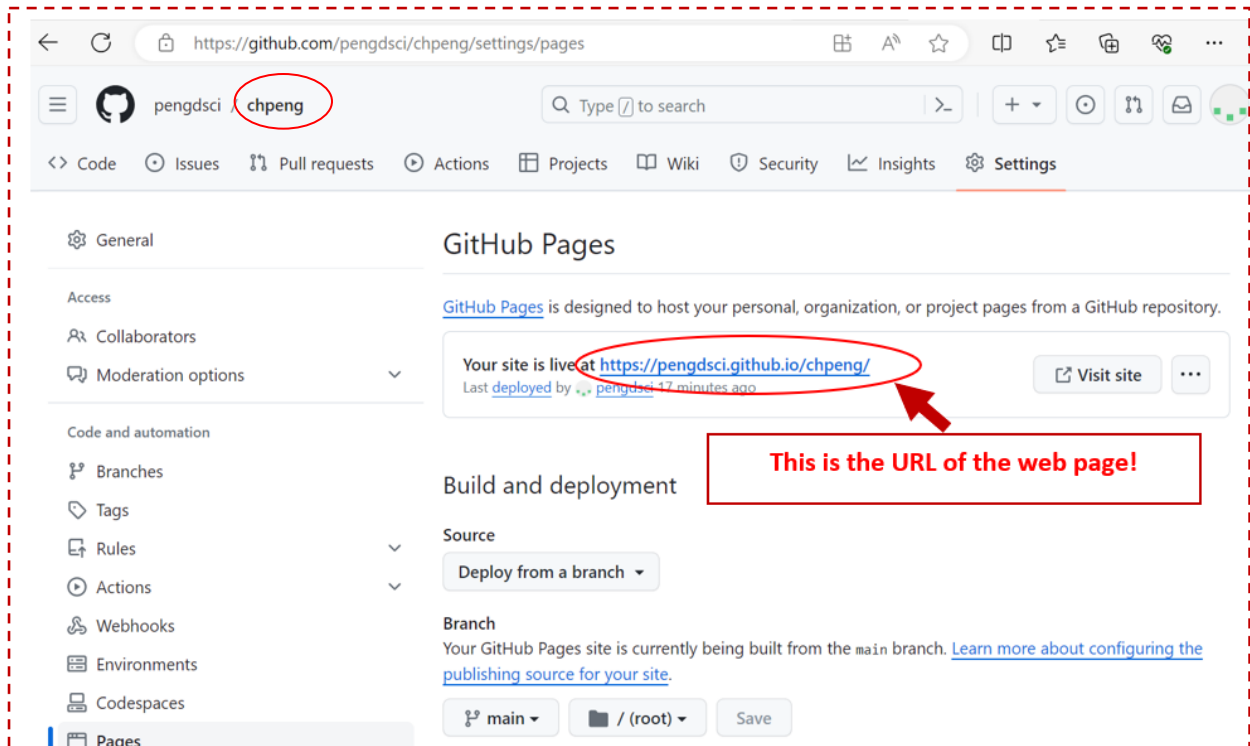

Click  Settings in the above screenshot to get

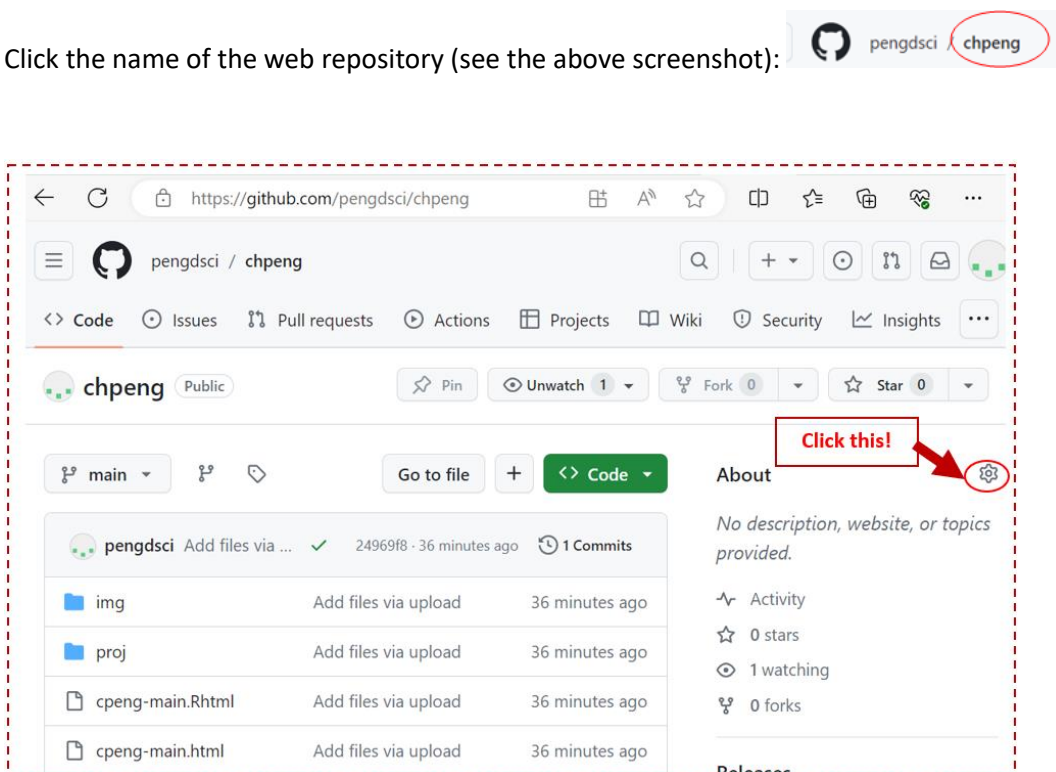

Step 4: Find the URL of your web page.

Click  Pages

Step 5. Last step

Click the name of the web repository (see the above screenshot):

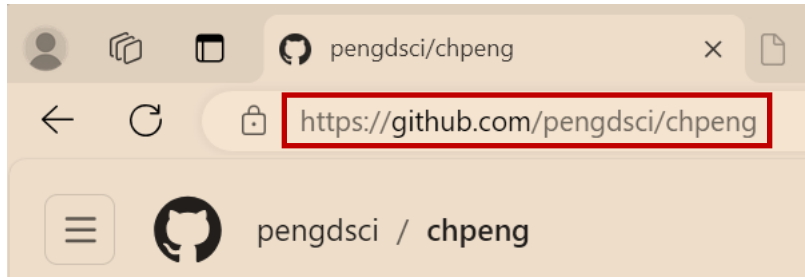

404

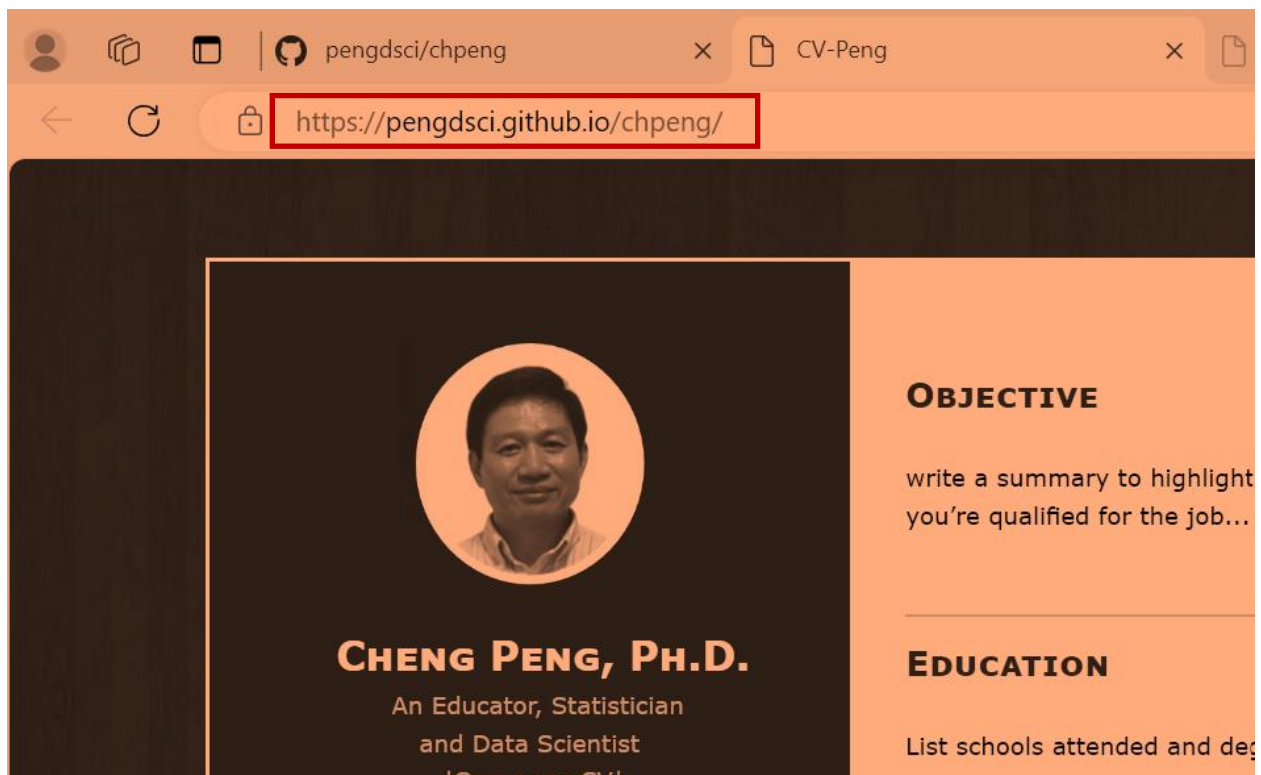

file not found

Repository URL and file URL for viewing the file correctly.

The URL of my web page repository is:

The URL of **index.html** in the web page repository is

If you want to view other files (such as **Ninja-YAML.txt**), the correct URL (for viewing this file) is

<https://pengdsci.github.io/chpeng/Ninja-YAML.txt>

If you want to view a file in a folder within the web repository. For example, **published-02.pdf** in folder **proj**

<https://pengdsci.github.io/chpeng/proj/published-02.pdf>

In general, the URL of a file in a configured GitHub repository has the following URL structure

<https://{userid}.github.io/{reponame}/filename>
